HIGHLIGHTS

This report presents data from the Treatment Episode Data Set (TEDS) by Census division and State or jurisdiction for admissions in 2011, and trend data for 2001 to 2011. The report provides information on the demographic and substance abuse characteristics of admissions to treatment aged 12 and older for abuse of alcohol and/or drugs in facilities that report to individual State administrative data systems. It is important to note that values in charts, narrative lists, and percentage distributions are calculated using actual raw numbers and rounded for presentation in this report; calculations using rounded values may produce different results.

For 2011, a total of 1,844,719 substance abuse treatment admissions aged 12 and older were reported to TEDS by 46 States, the District of Columbia, and Puerto Rico (Alabama, Georgia, Idaho, and Mississippi did not report admissions for 2011) [Table 1.1].

Trends in Substance Abuse Treatment Admissions Aged 12 and Older: 2001-2011

All Admissions

- In the United States, between 2001 and 2011, across the nine Census divisions, about 23 percent of all admissions reported were in the Middle Atlantic division, and the average rate of admissions was highest in the New England and Middle Atlantic divisions—1,507 and 1,219 per 100,000 population aged 12 and older, respectively in 2011 [Tables 1.1 and 1.2 and Figure 1].
- Between 2001 and 2011, the United States population aged 12 and older grew by about 11 percent, but the number of treatment admissions increased by 4 percent [Table 1.1]. Consequently, the treatment admission rate in 2011 (694 per 100,000 population aged 12 and older) was about 6 percent lower than the rate in 2001 (737 per 100,000 population) [Table 1.2].

Alcohol

- In the United States, the treatment admission rate for primary alcohol was 17 percent lower in 2011, at 272 per 100,000 population aged 12 and older, than in 2001 (327 per 100,000). The rate fluctuated between 2001 and 2011, but 2002 had the highest rate and 2011 had the lowest rate in this time period [Table 1.4b and Figure 2].
- Alcohol admission rates were lower in 2011 than in 2001 in six of the nine Census divisions; the exceptions were the New England, West North Central, and Mountain divisions.
- From 2001 through 2011, alcohol treatment admission rates were generally highest in the Middle Atlantic, New England, Mountain, and West North Central divisions.

Marijuana

- In the United States, the treatment admission rate for primary marijuana was 14 percent higher in 2011, at 125 per 100,000 population aged 12 and older, than in 2001 (110 per 100,000) [Table 1.5b and Figure 3].
- Marijuana admission rates were higher in 2011 than in 2001 in six of the nine divisions, the same in two divisions, and lower in one division (East South Central division).
- From 2001 through 2011, marijuana treatment admission rates were consistently highest in the West North Central and Middle Atlantic divisions.

Heroin

- In the United States, the treatment admission rate for primary heroin was 9 percent lower in 2011, at 105 per 100,000 population aged 12 and older, than in 2001 (116 per 100,000) [Table 1.6b and Figure 4].
- Heroin admission rates were higher in 2011 than in 2001 in five of the nine Census divisions and lower in the other four divisions (Pacific, South Atlantic, New England, and Middle Atlantic).
 The rate dropped dramatically in the Pacific division during this period (from 147 per 100,000 to just 88 per 100,000 population).
- From 2001 through 2011, heroin treatment admission rates were consistently highest in the New England and Middle Atlantic divisions.

Cocaine

- In the United States, the treatment admission rate for primary cocaine was 44 percent lower in 2011, at 54 per 100,000 population aged 12 and older, than in 2001 (96 per 100,000) [Table 1.7b and Figure 5].
- Cocaine admission rates were lower in 2011 than in 2001 in all nine Census divisions.
- From 2001 through 2011, cocaine treatment admission rates were highest in the Middle Atlantic division.

Methamphetamine/amphetamines

- In the United States, the treatment admission rate for methamphetamine/amphetamines was 4 percent higher in 2011, at 42 per 100,000 population aged 12 and older, than in 2001 (40 per 100,000). Methamphetamine/amphetamine treatment admission rates peaked in 2005 at 69 per 100,000, then declined in every year through 2011 [Table 1.8b and Figure 6].
- Methamphetamine/amphetamine rates were higher in 2011 than in 2001 in all Census divisions except for the Pacific and East South Central divisions.
- From 2001 through 2011, methamphetamine/amphetamine treatment admission rates were highest in the Pacific division, followed by the West North Central or Mountain division.

Opiates other than heroin

- In the United States, the treatment admission rate for opiates other than heroin was 348 percent higher in 2011, at 70 per 100,000 population aged 12 and older, than in 2001 (16 per 100,000). Rates increased in every year from 2001 through 2011 [Table 1.9b and Figure 7].
- The admission rates for opiates other than heroin were higher in 2011 than in 2001 for all nine Census divisions.
- From 2001 through 2011, treatment admission rates for opiates other than heroin were highest in the New England division.

Substance Abuse Treatment Admissions Aged 12 and Older: 2011

- In 2011, the treatment admission rate was higher for primary alcohol abuse than for any primary illicit drug. The primary alcohol admission rate was 272 per 100,000 population (the rate for alcohol alone was 150 per 100,000 and the rate for alcohol with secondary drug abuse was 122 per 100,000). The highest rates of treatment admissions for illicit drugs in 2011 were for marijuana (125 per 100,000) and heroin (105 per 100,000) [Table 2.3].
- Treatment admission rates for 2011 were higher for primary alcohol abuse than for any of the major illicit drugs in 8 of the 9 Census divisions (the exception was the East South Central division), and in 42 of the 48 reporting States and jurisdictions. The primary illicit drug with the highest admission rate varied by division: heroin in the New England and Middle Atlantic divisions, methamphetamine/amphetamines in the Pacific division, non-heroin opiates in the East South Central division, and marijuana in the other five divisions [Table 2.3].

CHAPTER 1

TRENDS IN SUBSTANCE ABUSE TREATMENT ADMISSIONS AGED 12 AND OLDER: 2001-2011

This report presents data from the Treatment Episode Data Set (TEDS) by Census division and State or jurisdiction for admissions in 2011 and trend data for 2001 to 2011. It is a companion to the report, *Treatment Episode Data Set (TEDS): 2001-2011 National Admissions to Substance Abuse Treatment*. These reports provide information on the demographic and substance abuse characteristics of admissions to treatment aged 12 and older for abuse of alcohol and/or drugs in facilities that report to individual State administrative data systems. Data include records for admissions during calendar years 2001 through 2011 that were received and processed through October 15, 2012.

TEDS is an admission-based system, and TEDS admissions do not represent individuals. Thus, an individual admitted to treatment twice within a calendar year would be counted as two admissions.

TEDS does not include all admissions to substance abuse treatment. It includes admissions to facilities that are licensed or certified by the State substance abuse agency to provide substance abuse treatment (or are administratively tracked for other reasons). In general, facilities reporting TEDS data are those that receive State alcohol and/or drug agency funds (including Federal Block Grant funds) for the provision of alcohol and/or drug treatment services. Additional information on the history and methodology of TEDS and this report as well as important issues related to State data collection systems are detailed in Appendix A.

This chapter details trends in the annual numbers and rates of admissions aged 12 and older for 2001 to 2011. Trend data are invaluable in monitoring changing patterns in substance abuse treatment admissions. These patterns reflect underlying changes in substance abuse in the population as well as changing priorities in the treatment/reporting system. TEDS data thus have important implications for resource allocation and program planning.

While the tables in this report present data by Census division (Figure 1) and by State or jurisdiction, it is important to note that comparisons between and across divisions and States should be made with caution. There are many factors (e.g., facilities included, clients included, ability to track multi-service episodes, services offered, and completeness and timeliness of reporting) that can affect comparability. See Appendix A for a full discussion.

For researchers interested in more detailed analysis, TEDS public use files are available for online data analysis or download at the Substance Abuse and Mental Health Data Archive, which can be accessed at http://www.datafiles.samhsa.gov.

Summary data for individual States that have submitted the full year of data are available online through the TEDS Quick Statistics website at http://wwwdasis.samhsa.gov/webt/NewMapv1.htm.

All Admissions

Table 1.1 presents the total number of treatment admissions aged 12 and older by Census division and State or jurisdiction for 2001 through 2011.²

- For 2011, a total of 1,844,719 admissions aged 12 and older were reported to TEDS by 46 States, the District of Columbia, and Puerto Rico (Alabama, Georgia, Idaho, and Mississippi did not report admissions for 2011).
- Between 2001 and 2011, the number of treatment admissions aged 12 and older increased by 4 percent.
- Between 2001 and 2011, about 23 percent of all admissions reported were in the Middle Atlantic division. The East North Central, South Atlantic, and Pacific divisions each reported roughly 14 to 15 percent of all admissions; the Mountain, New England and West North Central divisions each reported 8 to 9 percent of all admissions; and the East South Central and West South Central divisions each reported 3 to 5 percent of all admissions.

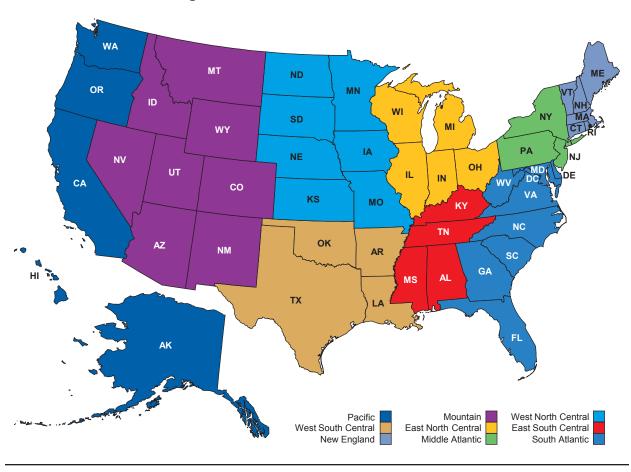

Figure 1. United States Census divisions

Data were not submitted or were incomplete for one or more years in some States or jurisdictions because of changes to their data collection systems: Alabama (2007, 2011), Alaska (2004-2006), Arkansas (2004), the District of Columbia (2004-2010), Georgia (2006-2011), Idaho (2011), Mississippi (2010-2011), Puerto Rico (2001-2002), and West Virginia (2001-2002).

Table 1.2 presents the treatment admission rates per 100,000 population aged 12 and older by Census division and State or jurisdiction for 2001 through 2011.

- Between 2001 and 2011, the United States population aged 12 and older grew by about 11 percent, but the number of treatment admissions increased by only 4 percent. Consequently, the treatment admission rate in 2011 (694 per 100,000 population aged 12 and older) was about 6 percent lower than the rate in 2001 (737 per 100,000 population).
- Admission rates were highest in the New England and Middle Atlantic divisions. In New England, the rate was lowest in 2003, at 1,132 per 100,000 population aged 12 and older, and highest in 2011, at 1,507 per 100,000 population aged 12 and older. The rates in the Middle Atlantic division did not vary much over the 11-year period, starting at 1,248 in 2001 and ending at 1,219 per 100,000 population aged 12 and older in 2011.
- In 2011, individual State admission rates (excluding Puerto Rico) varied from approximately 182 per 100,000 population to about 2,068 per 100,000. As noted above, there are many possible explanations for this variation (see Appendix A), and comparisons among States should be made with caution.

Table 1.3 presents the treatment admission rate adjusted for age, gender, and race/ethnicity to the United States 2000 population by Census division and State or jurisdiction for 2001 through 2011. Adjustment is a way to make fairer comparisons when there are different admission rates among population subgroups and different proportions of the subgroups in each division, State, or jurisdiction. The adjusted rates are the rates that would have been seen if each division, State, or jurisdiction had the same distribution of subgroups as the United States 2000 population.

For example, the 2011 unadjusted rates (Table 1.2) for Alaska and Rhode Island were 1,125 and 1,217 per 100,000 population aged 12 and older, respectively—these two States had similar rates. However, the adjusted rates (771 per 100,000 for Alaska and 1,236 per 100,000 for Rhode Island; Table 1.3) indicate that, if the population distribution in the two States were similar, Alaska's admission rate would be 38 percent lower than Rhode Island's. This is because Alaska had high admission rates in subgroups that were a large proportion of the State's population but represented relatively small proportions of the United States population. In contrast, Rhode Island's population distribution very closely resembles the United States population. This example clearly demonstrates that if Alaska's 2011 population distribution were similar to that of the United States in 2000, then one would expect the admission rate to be about 69 percent of what it actually was in 2011.

Selected Primary Substance

Six substance groups (alcohol, marijuana, heroin, cocaine, methamphetamine/amphetamines, and opiates other than heroin³) accounted for 98 percent of all TEDS admissions aged 12 and older in 2011.⁴

Opiates other than heroin include methadone, codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects.

See: Substance Abuse and Mental Health Services Administration, *Treatment Episode Data Set (TEDS). 2001 - 2011.*National Admissions to Substance Abuse Treatment Services, BHSIS Series: S-61, HHS Publication No. (SMA) 12-4701, Rockville, MD; Substance Abuse and Mental Health Services Administration, 2013, Table 1.1b.

Tables 1.4a–1.9a present the numbers of admissions aged 12 and older by Census division and by State and jurisdiction from 2001 through 2011 for each of the selected primary substances.

Tables 1.4b–1.9b present the admission rate per 100,000 aged 12 and older by Census division and by State and jurisdiction from 2001 through 2011 for each of the selected primary substances.

The admission rates are mapped in *Figures 2 through 7*. The map categories are based on the median, 75th, 90th, and 99th percentiles of the range of 2001 admission rates for each substance. Therefore, assuming that 50 States and jurisdictions reported in 2001, each 2001 map would show 1 State in dark red (the 99th percentile and above), about 5 States in light red (the 90th to 98th percentiles), about 8 States in orange (the 75th to 89th percentiles), about 12 States in yellow (the 50th to 74th percentiles), and about 24 States in tan (below the median 2000 United States rate). Cross-hatching indicate States or jurisdictions where data were not submitted or were incomplete.

Alcohol

- In the United States, the treatment admission rate for primary alcohol was 17 percent lower in 2011, at 272 per 100,000 population aged 12 and older, than in 2001 (327 per 100,000). The rate fluctuated between 2001 and 2011 but 2002 had the highest rate and 2011 had the lowest rate in this time period [Table 1.4b and Figure 2].
- Alcohol admission rates were between 19 to 62 percent lower in 2011 than in 2001 in six of the Census divisions. The rate was about 4 to 7 percent higher in the New England, Mountain, and West North Central divisions
- Alcohol admission rates were lower in 2011 than in 2001 in 31 of the 46 States and jurisdictions reporting in both years and higher in 15 States and jurisdictions. Nebraska experienced a 148 percent increase from 351 per 100,000 in 2001 to 871 per 100,000 in 2011.
- From 2001 through 2011, alcohol treatment admission rates were generally highest in the Middle Atlantic, New England, Mountain, and West North Central divisions.

Marijuana

- In the United States, the treatment admission rate for primary marijuana was 14 percent higher in 2011, at 125 per 100,000 population aged 12 and older, than in 2001 (110 per 100,000) [Table 1.5b and Figure 3].
- Marijuana admission rates were between 8 and 36 percent higher in 2011 than in 2001 in six of the nine Census divisions. The East South Central division had a 60 percent decline from 2001 (83 per 100,000) to 2011 (33 per 100,000). The East North Central and West South Central divisions had the same rate in 2001 and 2011.
- Marijuana admission rates were higher in 2011 than in 2001 in 29 of the 46 States and jurisdictions reporting in both years and lower in 17 States and jurisdictions. The admission rates of Arizona and the District of Columbia were more than doubled from 2001 to 2011.
- From 2001 through 2011, marijuana treatment admission rates were consistently highest in the West North Central and Middle Atlantic divisions.

Heroin

- In the United States, the treatment admission rate for primary heroin was 9 percent lower in 2011, at 105 per 100,000 population aged 12 and older, than in 2001 (116 per 100,000) [Table 1.6b and Figure 4].
- Despite the overall declining trend after 2001, heroin admission rates were between 51 and 206 percent higher in 2011 than in 2001 in five of the nine Census divisions (the East South Central, West North Central, West South Central, East North Central, and Mountain divisions). Rates were between 9 and 40 percent lower in 2011 than in 2001 in the other four divisions.
- Heroin admission rates were higher in 2011 than in 2001 in 29 of the 45 States and jurisdictions reporting in both years⁵ and lower in 16. Alaska, Nebraska, Kentucky, and Wisconsin experienced the largest growth of heroin admissions from 2001 to 2011.
- From 2001 through 2011, heroin treatment admission rates were consistently highest in the New England and Middle Atlantic divisions.

Cocaine

- In the United States, the treatment admission rate for primary cocaine was 44 percent lower in 2011, at 54 per 100,000 population aged 12 and older, than in 2001 (96 per 100,000) [Table 1.7b and Figure 5].
- Cocaine admission rates were between 13 and 71 percent lower in 2011 than in 2001 in the nine Census divisions.
- Cocaine admission rates were lower in 2011 than in 2001 in 40 of the 46 States and jurisdictions reporting in both years and higher in 6. South Dakota had a 122 percent increase in admission rates from 2001 to 2011.
- From 2001 through 2011, cocaine treatment admission rates were highest in the Middle Atlantic division.

Methamphetamine/amphetamines

- In the United States, the treatment admission rate for methamphetamine/amphetamines was 4 percent higher in 2011, at 42 per 100,000 population aged 12 and older, than in 2001 (40 per 100,000). Methamphetamine/amphetamine treatment admission rates peaked in 2005 at 69 per 100,000, then declined in every year through 2011 [Table 1.8b and Figure 6].
- Methamphetamine/amphetamine rates were between 6 and 91 percent higher in 2011 than in 2001 in seven of the nine Census divisions. The East South Central and Pacific divisions each had an 11 percent decrease in admission rates from 2001 to 2011.
- Methamphetamine/amphetamine admission rates were higher in 2011 than in 2001 in 31 of the 46 States and jurisdictions reporting in both years and lower in 15. North Carolina, Alaska,

⁵ Tennessee reported all heroin admissions as *Opiates other than heroin* for 2000 through June 2009. Tennessee began disaggregating heroin admissions from other opiates in July 2009 (Figures 4 and 7).

- Florida, New Mexico, South Carolina, South Dakota, and Michigan experienced the largest increases in admission rates between 2001 and 2011.
- From 2001 through 2011, methamphetamine/amphetamine treatment admission rates in the Pacific division were on average approximately 70 percent higher than in the division with the next highest rates, the West North Central Division.

Opiates other than heroin

- In the United States, the treatment admission rate for opiates other than heroin was 348 percent higher in 2011, at 70 per 100,000 population aged 12 and older, than in 2001 (16 per 100,000). Rates increased in every year from 2001 through 2011 [Table 1.9b and Figure 7].
- The admission rates for opiates other than heroin were between 207 and 541 percent higher in 2011 than in 2001 in the nine Census divisions.
- Admission rates for opiates other than heroin were higher in 2011 than in 2001 in all 46 States reporting in both years.
- From 2001 through 2011, treatment admission rates for opiates other than heroin were highest in the New England division. For each of those years, the New England rate was more than twice as high as the rates for most if not all of the other divisions.

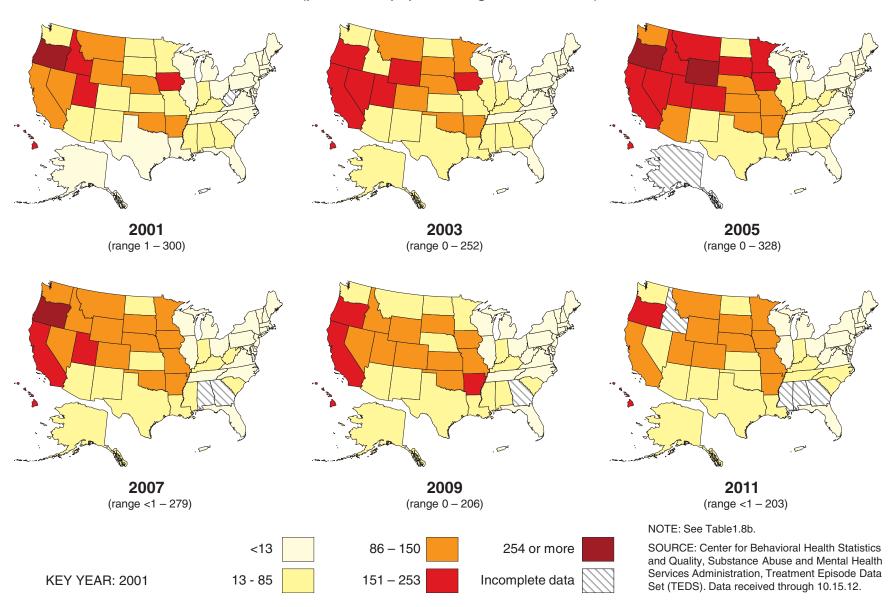

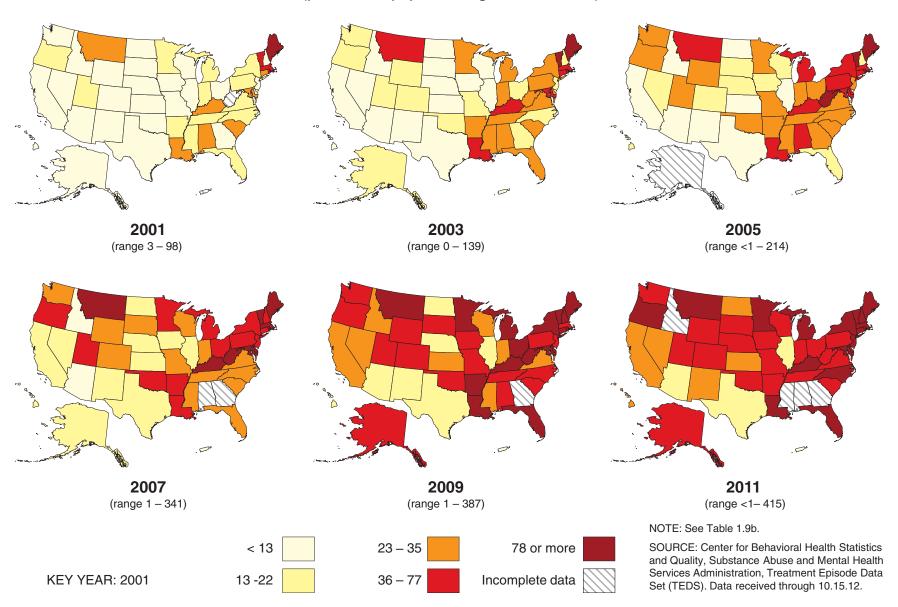

Figure 7. Primary non-heroin opiates/synthetics admission rates, by State or jurisdiction: 2001-2011 (per 100,000 population aged 12 and older)

CHAPTER 2

SUBSTANCE ABUSE TREATMENT ADMISSIONS AGED 12 AND OLDER, BY PRIMARY SUBSTANCE OF ABUSE: 2011

This chapter presents numbers of substance abuse treatment admissions aged 12 and older and admission rates from the Treatment Episode Data Set (TEDS) by Census division and State or jurisdiction for admissions in 2011, according to primary substance of abuse.

As noted previously, comparisons between and across divisions and States should be made with caution. There are many factors (e.g., facilities included, clients included, ability to track multi-service episodes, service type, and completeness and timeliness of reporting) that can affect comparability. See Appendix A for a full discussion.

Table 2.1 indicates the proportions of admissions in 2011 by service type according to Census division and State or jurisdiction. A State's mix of service types (e.g., outpatient, detoxification, rehabilitation/residential, opioid therapy) can have a significant effect on its admission rates. There is higher client turnover and therefore more admissions in short-stay services such as detoxification than in long-stay services such as outpatient or long-term rehabilitation/residential treatment. Admission rates for individual substances of abuse may be affected as well (e.g., detoxification is more closely associated with alcohol or heroin use than with use of other substances).¹

Table 2.2 presents the total number of treatment admissions aged 12 and older by primary substance of abuse, according to Census division and State or jurisdiction for 2011.

Table 2.3 presents the treatment admission rates per 100,000 population aged 12 and older by primary substance of abuse, according to Census division and State or jurisdiction for 2011.

- In 2011, the treatment admission rate was higher for primary alcohol abuse than for illicit drugs. The primary alcohol admission rate was 272 per 100,000 population (the rate for alcohol alone was 150 per 100,000 and the rate for alcohol with secondary drug abuse was 122 per 100,000). The highest rates for illicit drugs were for marijuana (125 per 100,000) and heroin (105 per 100,000).
- Treatment admission rates for 2011 were higher for primary alcohol abuse than for illicit drugs in 8 of the 9 Census divisions; the exception was the East South Central division, where the treatment admission rate for opiates other than heroin was higher than the rate for alcohol. The most common primary illicit drugs in each Census division were:
 - New England—heroin, opiates other than heroin, and marijuana
 - Middle Atlantic—heroin, marijuana, and cocaine

See: Substance Abuse and Mental Health Services Administration, *Treatment Episode Data Set (TEDS)*. 2001 - 2011. National Admissions to Substance Abuse Treatment Services, BHSIS Series: S-61, HHS Publication No. (SMA) 12-4701, Rockville, MD; Substance Abuse and Mental Health Services Administration, 2013, Table 2.7.

- East North Central—marijuana, heroin, and opiates other than heroin
- West North Central—marijuana, methamphetamine/amphetamines, and opiates other than heroin
- South Atlantic—marijuana, opiates other than heroin, and cocaine
- East South Central—opiates other than heroin, marijuana, and cocaine
- West South Central—marijuana, opiates other than heroin, and cocaine
- Mountain—marijuana, methamphetamine/amphetamines, and heroin
- Pacific—methamphetamine/amphetamines, marijuana, and heroin
- Treatment admission rates for 2011 were higher for primary alcohol abuse than for any of the major illicit drugs in 42 of the 48 reporting States and jurisdictions. The exceptions where an illicit drug admission rate was higher than the alcohol admission rate were Delaware (marijuana), Massachusetts and New Jersey (heroin), Kentucky and West Virginia (opiates other than heroin), and California (methamphetamine/amphetamines).
- In the 42 States or jurisdictions where admission rates for primary alcohol were higher than the rate for any illicit drug, the primary illicit drugs with the highest treatment admission rates were:
 - Marijuana—Alaska, Arizona, Arkansas, Colorado, Florida, Hawaii, Indiana, Iowa, Kansas, Louisiana, Minnesota, Missouri, Montana, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, South Carolina, South Dakota, Texas, Virginia, Washington, Wisconsin, and Wyoming
 - Heroin—Connecticut, the District of Columbia, Illinois, Maryland, Michigan, New York, Pennsylvania, Puerto Rico, and Rhode Island
 - Opiates other than heroin—Maine, New Hampshire, Tennessee, and Vermont
 - Methamphetamine/amphetamines—Nebraska, Nevada, New Mexico, and Utah

Table 2.4 presents the 2011 treatment admission rate by primary substance, adjusted for age, gender, and race/ethnicity to the United States 2000 population by Census division and State or jurisdiction. Adjustment is a way to make fairer comparisons when there are different admission rates among population subgroups and different proportions of the subgroups in each division, State, or jurisdiction. The adjusted rates are the rates that would have been seen if each division, State, or jurisdiction had the same distribution of subgroups as the United States 2000 population.

- Adjustment of the 2011 treatment admission rates for age, gender, and race/ethnicity did not
 change the relative ranking of alcohol and illicit drugs for the United States as a whole or for
 most of the Census divisions. For the East South Central division, alcohol replaced opiates other
 than heroin as the most common substance of abuse among treatment admissions.
- Adjustment of the 2011 treatment admission rates for age, gender, and race/ethnicity did not
 change the relative ranking of alcohol and illicit drugs for most States. For Delaware, opiates
 other than heroin replaced marijuana as the most common illicit substance of abuse among
 treatment admissions. For West Virginia, alcohol replaced opiates other than heroin as the most
 common substance of abuse among treatment admissions.

CHAPTER 3

CHARACTERISTICS OF SUBSTANCE ABUSE TREATMENT ADMISSIONS AGED 12 AND OLDER, BY STATE OR JURISDICTION AND PRIMARY SUBSTANCE OF ABUSE: 2011

This chapter presents data on the demographic characteristics of substance abuse treatment admissions aged 12 and older from the Treatment Episode Data Set (TEDS) by primary substance of abuse for individual States and jurisdictions.

As noted previously, comparisons between and across States and jurisdictions should be made with caution. There are many factors (e.g., facilities included, clients included, ability to track multiservice episodes, services offered, and completeness and timeliness of reporting) that can affect comparability. See Appendix A for a full discussion.

Tables 3.1-3.49 present, for each State or jurisdiction reporting admissions for 2011 to TEDS, the percentage distribution of demographic characteristics (gender, age group, and race/ethnicity) by primary substance of abuse for admissions aged 12 and older.

Figures 8-59 depict, for each individual State or jurisdiction, the percentage distribution of admissions aged 12 and older for selected primary substances for 2001 through 2011.

Figure 8. Alabama admissions aged 12 and older, by primary substance of abuse: 2001-2011

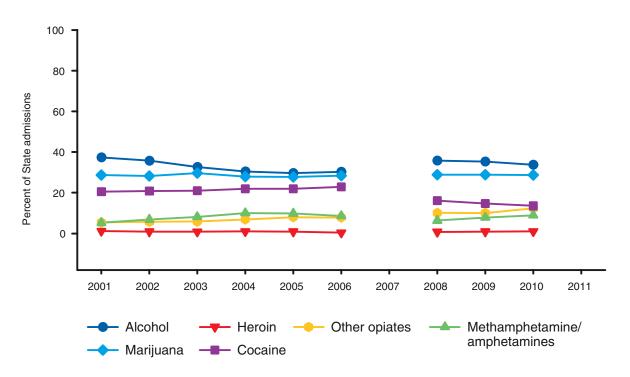

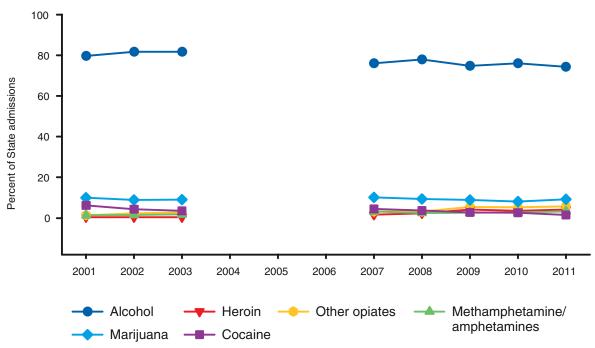

Figure 9. Alaska admissions aged 12 and older, by primary substance of abuse: 2001-2011

NOTE: Data were not submitted for Alabama for 2007 or 2011 or for Alaska for 2004 to 2006 because of changes to the data collection systems.

These drugs include codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects. Non-prescription use of methadone is not included.

² Tennessee included heroin admissions in other opiates through June 2009. In this report, Tennessee's 2009 heroin admissions are still included in the other opiates category since there is less than a full year of disaggregated heroin data.

⁻⁻ Quantity is zero.

[‡] No data, or less than a full calendar year of data, submitted.

¹ These drugs include codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects. Non-prescription use of methadone is not included.

SOURCES: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 10.15.12. Population: U.S. Census Bureau, SC-EST2009-agesex-res, SC-EST2011-agesex-res and SC-EST2011-ALLDATA6-ALL: for Annual Estimates of the Resident Population by Single-Year of Age, Sex, Race and Hispanic origin for the United States and States: April 1, 2001 to July 1, 2011. PRC-EST2009-AGESEX-RES and PRC-EST2011-AGESEX-RES: for Annual Estimates of the Resident Population by Single-Year of Age and Sex for Puerto Rico: April 1, 2001 to July 1, 2011.

² Tennessee included heroin admissions in other opiates through June 2009. In this report, Tennessee's 2009 heroin admissions are still included in the other opiates category since there is less than a full year of disaggregated heroin data.

^{- -} Quantity is zero.

[†] Less than 1 per 100,000.

[‡] No data, or less than a full calendar year of data, submitted.

APPENDIX A

ABOUT THE TREATMENT EPISODE DATA SET (TEDS)

Introduction

This report presents data from the Treatment Episode Data Set (TEDS) on the demographic and substance abuse characteristics of admissions to substance abuse treatment. The Center for Behavioral Health Statistics and Quality (CBHSQ), Substance Abuse and Mental Health Services Administration (SAMHSA), coordinates and manages collection of TEDS data from the States.

The Treatment Episode Data Set (TEDS) is a compilation of client-level data routinely collected by the individual State administrative data systems to monitor their substance abuse treatment systems. Generally, facilities that are required to report to the State substance abuse agency (SSA) are those that receive public funds and/or are licensed or certified by the SSA to provide substance abuse treatment (or are administratively tracked for other reasons).

TEDS is one of the three components of SAMHSA's Behavioral Health Services Information System (BHSIS), the primary source of national data on substance abuse treatment. The other two components are:

- The Inventory of Substance Abuse Treatment Services (I-SATS), a continuously-updated comprehensive listing of all known public and private substance abuse treatment facilities.
- The National Survey of Substance Abuse Treatment Services (N-SSATS), an annual survey of the location, characteristics, services offered, and utilization of alcohol and drug abuse treatment facilities in I-SATS.

The TEDS system comprises two major components, the Admissions Data Set and the Discharge Data Set. The TEDS Admissions Data Set includes client-level data on substance abuse treatment admissions from 1992 through the present. The TEDS Discharge Data Set can be linked at record level to admissions, and includes information from clients discharged in 2000 and later. For both data sets, selected data items from the individual State data files are converted to a standardized format consistent across States. These standardized data constitute TEDS.

The TEDS Admissions Data System consists of a Minimum Data Set of items collected by all States, and a Supplemental Data Set where individual data items are reported at the States' option.

The Minimum Data Set consists of 19 items that include:

- Demographic information
- Primary, secondary, and tertiary substances and their route of administration, frequency of use, and age at first use
- Source of referral to treatment

- Number of prior treatment episodes
- Service type, including planned use of medication-assisted opioid therapy

The Supplemental Data Set consists of 17 items that include psychiatric, social, and economic measures.

History

National-level data collection on admissions to substance abuse treatment was first mandated in 1972 under the Drug Abuse Office and Treatment Act, P.L. 92-255. This act initiated Federal funding for drug treatment and rehabilitation, and required reporting on clients entering drug (but not alcohol) abuse treatment. The Client-Oriented Data Acquisition Process (CODAP) was developed to collect admission and discharge data directly from Federally-funded drug treatment programs. (Programs for treatment of alcohol abuse were not included.) Reporting was mandatory for all such programs, and data were collected using a standard form. CODAP included all clients in Federally-funded programs regardless of individual funding source. Reports were issued from 1973 to 1981 based on data from 1,800 to 2,000 programs, including some 200,000 annual admissions.

In 1981, collection of national-level data on admissions to substance abuse treatment was discontinued because of the introduction of the Alcohol, Drug Abuse, and Mental Health Services (ADMS) Block Grant. The Block Grant transferred Federal funding from individual programs to the States for distribution, and it included no data reporting requirement. Participation in CODAP became voluntary; although several States submitted data through 1984, the data were in no way nationally representative.

In 1988, the Comprehensive Alcohol Abuse, Drug Abuse, and Mental Health Amendments (P.L. 100-690) established a revised Substance Abuse Prevention and Treatment (SAPT) Block Grant and mandated Federal data collection on clients receiving treatment for either alcohol or drug abuse. The Treatment Episode Data Set (TEDS) data collection effort represents the Federal response to this mandate. TEDS began in 1989 with the issue of 3-year development grants to States.

State Data Collection Systems

TEDS is an exceptionally large and powerful data set that covers a significant proportion of all admissions to substance abuse treatment. TEDS is a compilation of data collected through the individual data collection systems of the State substance abuse agencies (SSAs) for substance abuse treatment. States have cooperated with the Federal Government in the data collection process, and substantial progress has been made toward developing a standardized data set. However, because each State system is unique and each State has unique powers and mandates, significant differences exist among State data collection systems. These differences are compounded by evolving health care payment systems, and State-to-State comparisons must be made with extreme caution.

The number and client mix of TEDS admissions do not represent the total national demand for substance abuse treatment or the prevalence of substance abuse in the general population.

States differ widely in the amount of public funding available for substance abuse treatment and in the constraints placed on the use of funds. States may be directed to target special populations such as pregnant women or adolescents. Where funds are limited, States may be compelled to exercise triage in admitting persons to treatment, admitting only those with the most "severe" problems. In States with higher funding levels, a larger proportion of the population in need of treatment may be admitted, including the less severely impaired.

States may include or exclude reporting by certain sectors of the treatment population, and these sectors may change over time. For example, treatment programs based in the criminal justice system may or may not be administered through the State SSA. Detoxification facilities, which can generate large numbers of admissions, are not uniformly considered treatment facilities and are not uniformly reported by all States.

Appendix Table 1 presents key characteristics of State data collection systems for 2011. However, these characteristics can change as State substance abuse treatment systems change, and thus may be responsible for some year-to-year variation within States.

- Facilities included. The scope of facilities included in TEDS is affected by differences in State licensure, certification, and accreditation practices, and disbursement of public funds. Most SSAs require facilities that receive State/public funding (including Federal Block Grant funds) for the provision of alcohol and/or drug treatment services to report data to the SSA. Generally this funding is distributed by the SSA but may be distributed by another public agency.
- Some SSAs regulate private facilities, methadone clinics, and/or individual practitioners and require them to report TEDS data. Others do not because of the difficulty in obtaining data from these facilities, although these facilities may report voluntarily. Facilities operated by Federal agencies (e.g., the Bureau of Prisons, the Department of Defense, and the Department of Veterans Affairs) generally do not report TEDS data to the SSA, although some facilities operated by the Indian Health Service are included. Hospital-based substance abuse treatment facilities are frequently not licensed through the SSA and do not report TEDS data. Correctional facilities (State prisons and local jails) are monitored by the SSA and report TEDS data in some States but not in others.
- The primary goal of TEDS is to monitor the characteristics of clients admitted to planned, continuing treatment regimens. Thus early intervention and crisis intervention programs that do not lead to enrollment in continued treatment are excluded from TEDS.
- Clients included. About 60 percent of States reported data on all admissions to all eligible facilities, although some reported only, or largely, admissions financed by public funds. TEDS is an admission-based system; therefore, TEDS admissions do not represent individuals. For example, an individual admitted to treatment twice within a calendar year would be counted as two admissions.
- Ability to track multi-service episodes. The goal for the TEDS system is to enumerate treatment episodes by distinguishing the initial admission of a client from his/her subsequent transfer to a different service type (e.g., from rehabilitation/residential treatment to outpatient) within a single continuous treatment episode. Thus TEDS records are ideally coded as admissions if they represent the initial treatment service in a treatment episode and as transfers if they represent a change in service type or a change in provider without an interruption in treatment.

This requires, however, that clients be assigned unique IDs that can be linked across providers; not all States are legally and/or technologically able to do this. Most States can identify as transfers a change in service type within the structure of a given provider. However, fewer can also identify a transfer involving a change of provider. Several States do not track transfers, but instead report as transfers those clients who are discharged and readmitted within a specified (State-specific) time period.

Because some admission records in fact may represent transfers, the number of admissions reported probably overestimates the number of treatment episodes. Some States reported a limited data set on codependents of substance abusers entering treatment. On average, from 2001 through 2011, 85 percent of all records submitted were client admissions, 13 percent were client transfers, and 2 percent were codependents of substance abusers.

- Services offered. A State's mix of service types (e.g., outpatient, detoxification, rehabilitation/ residential, opioid therapy) can have a significant effect on its admission rate. There is higher client turnover and therefore more admissions in short-stay services such as detoxification than in long-stay services such as outpatient or long-term residential treatment. Admission rates for individual substances of abuse may be affected as well (e.g., detoxification is more closely associated with alcohol or heroin use than with use of other substances).
- Completeness and timeliness of reporting. SAMHSA, in reporting national-level TEDS data, must balance timeliness of reporting and completeness of the data set. There may be a time lag in the publication of SAMHSA's annual report because preparation cannot begin until States have completed their data submission for that year. States in turn rely on individual facilities to report in a timely manner so they can submit TEDS data to SAMHSA at regular intervals.

Admissions from facilities that report late to the States will appear in a later data submission to SAMHSA, so the number of annual admissions in a report may be higher in subsequent reports. The number of additional admissions is small because of the time lag in issuing the report. Thus the percentage distributions will change very little in subsequent reports, although Census division- and State-level data may change somewhat more for States with reporting delays (State report only).

States continually review and improve their data collection and processing. When systematic errors are identified, States may revise or replace historical TEDS data files. While this process represents an improvement in the data system, the historical statistics in this report will differ slightly from those in earlier reports.

Appendix Tables 2 and 3 indicate the proportions of records by State or jurisdiction for which valid data were received for 2011. States are expected to report all variables in the Minimum Data Set (Appendix Table 2). Variables in the Supplemental Data Set are collected at the States' option (Appendix Table 3).

Report-Specific Considerations

• The report focuses on treatment admissions for substance abusers, so admissions for treatment as a codependent of a substance abuser are excluded. Records for identifiable transfers within a single treatment episode are also excluded.

- Records with partially complete data have been retained. Where records include missing or
 invalid data for a specific variable other than primary, secondary, or tertiary substance, those
 records are excluded from tabulations of that variable. For substance variables, missing or
 unknown responses were included in the category "Other." The total number of admissions on
 which a percentage distribution is based is reported in each table.
- Records with partially complete data have been retained. If a variable is coded with a value
 indicating the data were missing or miscoded, the record is excluded from tabulations of that
 variable. The total number of records on which a percentage distribution is based is reported
 in each table.
- Variables in the Supplemental Data Set are not collected by all States. States that did not collect
 a specific variable are excluded from tabulations of that variable. The total number of admissions on which a percentage distribution is based is reported in each table.
- The *primary, secondary, and tertiary substances of abuse* reported to TEDS are those substances that led to the treatment episode and not necessarily a complete enumeration of all drugs used at the time of admission.
- Primary alcohol admissions are classified as "Alcohol only" or "Alcohol with secondary drug abuse." The latter indicates a primary alcohol admission with a specified secondary and/or tertiary drug. All other primary alcohol admissions are classified as "Alcohol only."
- Cocaine admissions are classified according to route of administration as smoked and other
 route. Smoked cocaine primarily represents crack or rock cocaine, but can also include cocaine
 hydrochloride (powder cocaine) when it is free-based. Non-smoked cocaine includes all cocaine
 admissions where cocaine is injected, inhaled, or taken orally; it also includes admissions where
 the route of administration is unknown or not collected. Thus the TEDS estimate of admissions
 for smoked cocaine is conservative.
- Methamphetamine/amphetamine admissions include admissions for both substances, but are
 primarily for methamphetamine. In 2011, methamphetamine constituted about 92 percent of
 combined methamphetamine/amphetamine admissions. Oregon and Texas, States with large
 numbers of methamphetamine admissions, reported them as *Other amphetamines* until 2005
 and 2006, respectively.
- For this report, secondary and tertiary substances (see Appendix B) are grouped and referred to as secondary substances.
- Significant changes in the clients or facilities reported to TEDS by some States and jurisdictions can result in changes in the number of admissions large enough to influence trends.

¹ Percent of admissions reporting a specified primary substance.

SOURCE: Center for Behavioral Health Statistics and Quality, Substance Abuse and Mental Health Services Administration, Treatment Episode Data Set (TEDS). Data received through 10.15.12.

⁵ Percent of admissions reporting employment status as "Not in labor force."

⁶ Percent of admissions reporting referral source as "Criminal justice system."

² Percent of admissions reporting a specified secondary substance.

³ Percent of admissions reporting a specified tertiary substance.

⁻⁻ Quantity is zero.

[‡] No data, or less than a full calendar year of data, submitted.

¹⁴⁹

APPENDIX B TEDS DATA ELEMENTS

TEDS MINIMUM DATA SET

AGE OF FIRST USE (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCE)

For drugs other than alcohol, these fields identify the age at which the client first used the respective substance. For alcohol, these fields record the age of first intoxication.

- **0**—Indicates a newborn with a substance dependency problem
- 1-96—Indicates the age at first use

CLIENT OR CODEPENDENT/COLLATERAL

Specifies whether the admission record is for a substance abuse treatment client, or a person being treated for his/her codependency or collateral relationship with a substance abuser.

- Client—Must meet all of the following criteria:
 - Has an alcohol or drug related problem
 - Has completed the screening and intake process
 - Has been formally admitted for treatment or recovery service in an alcohol or drug treatment unit
 - Has his or her own client record

A person is not a client if he or she has completed only a screening or intake process or has been placed on a waiting list.

- Codependent/collateral—Must meet all of the following criteria:
 - Has no alcohol or drug related problem
 - Is seeking services because of problems arising from his or her relationship with an alcohol or drug user
 - Has been formally admitted for service to a treatment unit
 - Has his or her own client record or has a record within a primary client record

GUIDELINES: Reporting of data for *Codependent/collaterals* is optional. If the State opts to report codependent/collateral clients, the mandatory fields are *State code*, *Provider identifier*, *Client identifier*, *Client transaction type*, *Codependent/collateral*, and *Date of admission*. Reporting of the

remaining fields in the TEDS Minimum and Supplemental Data Sets is optional. For all items not reported, the data field should be coded with the appropriate "Not collected" or "Not applicable" code.

If a substance abuse client with an existing record in TEDS becomes a codependent, a new client record should be submitted indicating that the client has been admitted as a codependent, and vice versa.

If a record does not include a value for this field, it is assumed to be a substance abuse client record.

DATE OF ADMISSION

The day when the client receives his or her first direct treatment or recovery service. For transfers, this is the date when client receives his or her first direct treatment after the transfer has occurred.

DEMOGRAPHICS

AGE

Identifies client's age at admission. Derived from client's date of birth and date of admission.

- 0—Indicates a newborn with a substance dependency problem
- 1-96—Indicates the age at admission

EDUCATION

Specifies the highest school grade (number of school years) completed by the client.

- 0—Less than one grade completed
- 1-25—Years of school (highest grade) completed. For General Equivalency Degree, use 12.

GUIDELINES: States that use specific categories for designating education level should map their codes to a logical number of years of school completed. For Associate's Degree, use 14. For Bachelor's Degree, use 16.

EMPLOYMENT STATUS

Identifies the client's employment status at the time of admission or transfer.

- Full time—Working 35 hours or more each week, including active duty members of the uniformed services
- Part time—Working fewer than 35 hours each week
- Unemployed—Looking for work during the past 30 days, or on layoff from a job
- **Not in labor force**—Not looking for work during the past 30 days, or a student, homemaker, disabled, retired, or an inmate of an institution. Clients in this category are further defined in the TEDS Supplemental Data Set item *Detailed not-in-labor-force*.

GUIDELINES: Seasonal workers are coded in this category based on their employment status at admission.

ETHNICITY

Identifies client's specific Hispanic origin.

- Cuban—Of Cuban origin, regardless of race
- **Hispanic (specific origin not specified)**—Of Hispanic origin, but specific origin not known or not specified
- Mexican—Of Mexican origin, regardless of race
- Not of Hispanic origin
- Other specific Hispanic—Of known Central or South American or any other Spanish cultural origin (including Spain), other than Puerto Rican, Mexican, or Cuban, regardless of race
- Puerto Rican—Of Puerto Rican origin, regardless of race

GUIDELINES: If a State does not collect specific Hispanic detail, code *Ethnicity* for Hispanics as *Hispanic (specific origin not specified)*.

RACE

Specifies the client's race.

- Alaska Native (Aleut, Eskimo, Indian)—Origins in any of the original people of Alaska
- American Indian (other than Alaska Native)—Origins in any of the original people of North America and South America (including Central America) and who maintain cultural identification through tribal affiliation or community attachment
- **Asian or Pacific Islander**—Origins in any of the original people of the Far East, the Indian subcontinent, Southeast Asia, or the Pacific Islands
 - Asian—Origins in any of the original people of the Far East, the Indian subcontinent, or Southeast Asia, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Philippine Islands, Thailand, and Vietnam
 - Native Hawaiian or other Pacific Islander—Origins in any of the original people of Hawaii, Guam, Samoa, or other Pacific Islands
- Black or African American—Origins in any of the black racial groups of Africa
- White—Origins in any of the original people of Europe, North Africa, or the Middle East
- Other single race—Client is not classified in any category above or whose origin group, because of area custom, is regarded as a racial class distinct from the above categories

• **Two or more races**—For use when the State data system allows multiple race selection and more than one race is indicated

GUIDELINES: If a State does not distinguish between *American Indian* and *Alaska Native*, both should be coded as *American Indian*. If a State does not distinguish between *Asian* and *Native Hawaiian or other Pacific Islander*, both should be coded as *Asian or Pacific Islander*. For States that collect multiple races: a) when a single race is designated, the specific race code should be used; b) if the State collects a primary or preferred race along with additional races, the code for the primary/preferred race should be used; c) if the State uses a system such as an algorithm to select a single race when multiple races have been designated, the same system may be used to determine the race code for TEDS. When two or more races have been designated and neither (b) nor (c) above apply, the TEDS code for *Two or more races* should be used.

SEX

Identifies client's gender.

- Male
- Female

FREQUENCY OF USE (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCES)

These fields identify the frequency of use of the respective *Substance problems*.

- No use in the past month
- 1-3 times in the past month
- 1-2 times in the past week
- 3-6 times in the past week
- Daily

MEDICATION-ASSISTED OPIOID THERAPY

Identifies whether the use of methadone or buprenorphine is part of the client's treatment plan.

- Yes
- No

NUMBER OF PRIOR TREATMENT EPISODES

Indicates the number of previous treatment episodes the client has received in any drug or alcohol program. Changes in service for the same episode (transfers) should *not* be counted as separate prior episodes.

- 0 previous episodes
- 1 previous episode

- 2 previous episodes
- 3 previous episodes
- 4 previous episodes
- 5 or more previous episodes

GUIDELINES: It is preferred that the number of prior treatments be a self-reporting field collected at the time of client intake. However, this data item may be derived from the State data system if the system has that capability and episodes can be counted for at least several years.

PRINCIPAL SOURCE OF REFERRAL

Describes the person or agency referring the client to the alcohol or drug abuse treatment program.

- Alcohol/drug abuse care provider—Any program, clinic, or other health care provider whose
 principal objective is treating clients with substance abuse problems, or a program whose activities are related to alcohol or other drug abuse prevention, education, or treatment
- Court/criminal justice referral/DUI/DWI—Any police official, judge, prosecutor, probation officer, or other person affiliated with a Federal, State, or county judicial system. Includes referral by a court for DWI/DUI, clients referred in lieu of or for deferred prosecution, or during pretrial release, or before or after official adjudication. Includes clients on pre-parole, pre-release, work or home furlough, or TASC. Client need not be officially designated as "on parole." Includes clients referred through civil commitment. Client referrals on this category are further defined in the TEDS Supplemental Data Set item *Detailed criminal justice referral*.
- Employer/EAP—A supervisor or an employee counselor
- Individual (includes self-referral)—Includes the client, a family member, friend, or any other individual who would not be included in any of the following categories; includes self-referral due to pending DWI/DUI
- Other community referral—Community or religious organization or any Federal, State, or local agency that provides aid in the areas of poverty relief, unemployment, shelter, or social welfare. Self-help groups such as Alcoholics Anonymous (AA), Al-Anon, and Narcotics Anonymous (NA) are also included in this category. Defense attorneys are included in this category.
- Other health care provider—A physician, psychiatrist, or other licensed health care professional; or a general hospital, psychiatric hospital, mental health program, or nursing home
- **School (educational)**—A school principal, counselor, or teacher; or a student assistance program (SAP), the school system, or an educational agency

SUBSTANCE PROBLEM (PRIMARY, SECONDARY, OR TERTIARY)

These fields identify the client's primary, secondary, and tertiary substance problems. Each *Substance problem* (primary, secondary, and tertiary) has associated fields for *Route of administration*, *Frequency of use*, *Age at first use*, and the TEDS Supplemental Data Set item *Detailed drug code*.

- Alcohol
- **Barbiturates**—Amobarbital, pentobarbital, phenobarbital, secobarbital, etc.
- **Benzodiazepines**—Includes alprazolam, chlordiazepoxide, clonazepam, clorazepate, diazepam, flunitrazepam, flurazepam, halazepam, lorazepam, oxazepam, prazepam, temazepam, triazolam, and other unspecified benzodiazepines
- Cocaine/crack
- Heroin
- Inhalants—Includes chloroform, ether, gasoline, glue, nitrous oxide, paint thinner, etc.
- Marijuana/hashish—Includes THC and any other cannabis sativa preparations
- Methamphetamine
- Non-prescription methadone
- Other amphetamines—Includes amphetamines, MDMA, phenmetrazine, and other unspecified amines and related drugs
- Other hallucinogens—Includes LSD, DMT, STP, hallucinogens, mescaline, peyote, psilocybin, etc.
- Other non-barbiturate sedatives or hypnotics—Includes chloral hydrate, ethchlorvynol, glutethimide, methaqualone, and other non-barbiturate sedatives or hypnotics
- Other non-benzodiazepine tranquilizers—Includes meprobamate and other non-benzodiazepine tranquilizers
- Other opiates and synthetics—Includes buprenorphine, codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects
- Other stimulants—Includes methylphenidate and any other stimulants
- Over-the-counter medications—Includes aspirin, cough syrup, diphenhydramine and other antihistamines, sleep aids, and any other legally obtained nonprescription medication
- PCP—Phencyclidine
- Other—Includes diphenylhydantoin/phenytoin, GHB/GBL, ketamine, etc.
- None

GUIDELINES: Substance problems are further defined in the TEDS Supplemental Data Set item *Detailed drug code*. For guidance on which specific substances to include in the substance categories, please refer to the detailed drug categories listed for *Detailed drug code*.

• Substance problem and Route of administration:

- For States that do collect *Detailed drug code*—Records may have duplicate *Substance problems* and identical *Route of administration* IF the corresponding *Detailed drug codes* are different or are "multiple" drug codes
- For States that do not collect *Detailed drug code*—A record may not have duplicate *Substance problems* with identical *Routes of administration*

TRANSACTION TYPE

Identifies whether a record is for an initial admission or a transfer/change in service. Note: Some States may use other terminology such as "initial admission" and "transfer admission" in place of "admission" and "transfer"

- A—Admission
- T—Transfer/change in service

GUIDELINES: For TEDS, a treatment episode is defined as that period of service between the beginning of treatment for a drug or alcohol problem and the termination of services for the prescribed treatment plan. The episode includes one admission (when services begin) and at least one discharge (when services end). Within a treatment episode, a client may transfer to a different service, facility, provider, program, or location. Each admission and transfer record should have an associated discharge record.

When it is feasible for the State to identify transfers, they should be reported as transfers in admissions data submissions. When admissions and transfers cannot be differentiated in a State data system, such changes in service or facility should be reported to TEDS as admissions.

Data set considerations for transfers:

- All fields from the transfer record should be updated to reflect values at the time of transfer except the following fields, which must have the same values as in the associated (preceding) admission record: Client ID, Codependent/collateral, Date of birth, Sex, Race, and Ethnicity. If a field cannot be updated, it should be transmitted to TEDS with its value from the associated (preceding) admission record.
- *Date of admission* is defined as the date services begin after the transfer to another service or facility.

TYPE OF SERVICES

Describes the type of service and treatment setting in which the client is placed at the time of admission or transfer.

- **Ambulatory, detoxification**—Outpatient treatment services providing for safe withdrawal in an ambulatory setting (pharmacological or non-pharmacological)
- **Ambulatory, intensive outpatient**—As a minimum, the client must receive treatment lasting two or more hours per day for three or more days per week
- **Ambulatory, non-intensive outpatient**—Ambulatory treatment services including individual, family, and/or group services, and may include pharmacological therapies
- **Detoxification, 24-hour service, free-standing residential**—24-hour per day services in a non-hospital setting providing for safe withdrawal and transition to ongoing treatment
- **Detoxification, 24-hour service, hospital inpatient**—24-hour per day medical acute care services in a hospital setting for detoxification of persons with severe medical complications associated with withdrawal
- Rehabilitation/residential, hospital (other than detoxification)—24-hour per day medical care in a hospital facility in conjunction with treatment services for alcohol and other drug abuse and dependency
- Rehabilitation/residential, short-term (30 days or fewer)—Typically, 30 days or less of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency
- Rehabilitation/residential, long-term (more than 30 days)—Typically, more than 30 days of
 non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency; this may include transitional living arrangements such as halfway houses

USUAL ROUTE OF ADMINISTRATION (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCES)

These fields identify the usual route of administration of the respective *Substance problems*.

- Inhalation
- Injection (IV or intramuscular)
- Oral
- Smoking
- Other

TEDS SUPPLEMENTAL DATA SET

DAYS WAITING TO ENTER TREATMENT

Indicates the number of days from the first contact or request for service until the client was admitted and the first clinical service was provided.

• **0-996.** Number of days waiting

GUIDELINES: This item is intended to capture the number of days the client must wait to begin treatment because of program capacity, treatment availability, admissions requirements, or other program requirements. It should not include time delays caused by client unavailability or client failure to meet any requirement or obligation.

DETAILED CRIMINAL JUSTICE REFERRAL

This item gives more detailed information about those clients who are coded as "Court/criminal justice referral/DUI/DWI" in the TEDS Minimum Data Set item *Principal source of referral*.

- Diversionary program (e.g., TASC)
- DUI/DWI
- Other court (not State or Federal)
- Other recognized legal entity (e.g., local law enforcement agency, corrections agency, youth services, review board/agency)
- Prison
- Probation/parole
- State/Federal court
- Other
- Not applicable

DETAILED DRUG CODE (PRIMARY, SECONDARY, AND TERTIARY)

These fields identify, in greater detail, the drug problems recorded in the TEDS Minimum Data Set item *Substance problem*.

- Aerosols
- Alcohol

- Alprazolam (Xanax)
- Amphetamine
- Anesthetics
- **Chlordiazepoxide** (Librium)
- Clonazepam (Klonopin, Rivotril)
- Clorazepate (Tranxene)
- Codeine
- Crack
- Diazepam (Valium)
- Diphenhydramine
- Diphenylhydantoin/phenytoin (Dilantin)
- Ethchlorvynol (Placidyl)
- Flunitrazepam (Rohypnol)
- Flurazepam (Dalmane)
- **GHB/GBL** (gamma-hydroxybutyrate, gamma-butyrolactone)
- **Glutethimide** (Doriden)
- Heroin
- **Hydrocodone** (Vicodin)
- **Hydromorphone** (Dilaudid)
- **Ketamine** (Special K)
- Lorazepam (Ativan)
- LSD
- Marijuana/hashish
- **Meperidine** (Demerol)
- **Meprobamate** (Miltown)
- Methadone (non-prescription)
- Methamphetamine/speed
- Methagualone
- Methylenedioxymethamphetamine (MDMA, Ecstasy)
- **Methylphenidate** (Ritalin)
- Nitrites

DETAILED "NOT IN LABOR FORCE"

This item gives more detailed information about those clients who are coded as "Not in labor force" in the TEDS Minimum Data Set item *Employment Status*.

- Disabled
- Homemaker
- **Inmate of institution** (prison or institution that keeps a person, otherwise able, from entering the labor force)
- Retired
- Student

- Other
- Not applicable

DSM CRITERIA DIAGNOSIS

The diagnosis of the substance abuse problem from the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders*. DSM-IV is preferred, but use of the Third Edition or ICD codes is permissible.

EXPECTED/ACTUAL PRIMARY SOURCE OF PAYMENT

Identifies the primary source of payment for this treatment episode.

- Blue Cross/Blue Shield
- Medicaid
- Medicare
- Other government payments
- Other health insurance companies
- Self-pay
- Worker's Compensation
- No charge (free, charity, special research, or teaching)
- Other

FREQUENCY OF ATTENDANCE AT SELF-HELP PROGRAMS

This field records the number of times the client has attended a self-help program in the 30 days preceding the date of admission to treatment services.

- No attendance in the past month
- 1-3 times in the past month
- 4-7 times in the past month
- 8-15 times in the past month
- 16-30 times in the past month
- Some attendance in the past month, but frequency unknown

HEALTH INSURANCE

Specifies the client's health insurance (if any). The insurance may or may not cover alcohol or drug treatment.

- Blue Cross/Blue Shield
- Health maintenance organization (HMO)
- Medicaid
- Medicare
- **Private insurance** (other than Blue Cross/Blue Shield or an HMO)
- Other (e.g., TRICARE)
- None

LIVING ARRANGEMENTS

Specifies whether the client is homeless, living with parents, in a supervised setting, or living on his or her own

- **Dependent living.** Clients living in a supervised setting such as a residential institution, halfway house, or group home, and children (under age 18) living with parents, relatives, or guardians, or in foster care
- **Homeless.** Clients with no fixed address; includes shelters
- **Independent living.** Clients living alone or with others without supervision

MARITAL STATUS

Describes the client's marital status. The following categories are compatible with the U.S. Census.

- Divorced
- Never married. Includes clients whose only marriage was annulled
- Now married. Includes those living together as married
- **Separated.** Includes those separated legally or otherwise absent from spouse because of marital discord
- Widowed

NUMBER OF ARRESTS IN 30 DAYS PRIOR TO ADMISSION

This field records the number of arrests in the 30 days preceding the date of admission to treatment services.

• 00-96—Number of arrests

PREGNANT AT TIME OF ADMISSION

Specifies whether the client was pregnant at the time of admission.

- Yes
- No
- Not applicable. Use this code for male clients

PSYCHIATRIC PROBLEM IN ADDITION TO ALCOHOL OR DRUG PROBLEM

Identifies whether the client has a psychiatric problem in addition to his or her alcohol or drug use problem.

- Yes
- No

SOURCE OF INCOME SUPPORT

Identifies the client's principal source of financial support. For children under 18, this field indicates the parents' primary source of income/support.

- Disability
- Public assistance
- Retirement/pension
- Wages/salary
- Other
- None

VETERAN STATUS

Identifies whether the client has served in the uniformed services (Army, Navy, Air Force, Marines, Coast Guard, Public Health Service Commissioned Corps, Coast and Geodetic Survey, etc.).

- Yes
- No

At Synectics, Hongwei Zhang, Sarbajit Sinha, Doren Walker, and Leigh Henderson were responsible for the content, analysis, and writing of the report.
